Guide to content restriction on Xbox

Parental controls allow you to restrict child accounts on an Xbox One. You can restrict access to games, media, and apps by age rating, filter the web, and control online privacy and chat features.

This feature relies on your children each having their own accounts.

Respect

Teamwork

Empathy

Honesty

Family

Set up your family to manage your children's Xbox experiences.

Add Chris to your family?

This will make Chris part of your Xbox family. Any adult in a family can manage any of the children in the same family.

Add One or More Child Accounts to Your Family

You'll need to add separate accounts for your children to your Xbox One if you haven't already. Press the Xbox button on the centre of your controller to go to the dashboard, then tap left on the joystick or directional pad to open the menu. Scroll down to the gear icon and select "All Settings" with the A button.

Head to Account > Family on the Settings screen.

Respect Teamwork Empathy Self-Belief Honesty

Select “Add to Family” to add a children’s account to your family.

You’ll see a list of accounts enabled on your Xbox One. If the child already has an account on the Xbox One, select it. Otherwise, select “Add new.”

The child should sign in with his or her Microsoft account here. If the child doesn’t already have their own Microsoft account, you can select “Get a new account” and create one. You can also just create a Microsoft account online and sign in with it here.

Respect Teamwork Empathy Self-Belief Honesty

You'll see the "Ask Your Parent to sign in" screen if you're signing in with an underage account. Select "I'm an adult." You'll then need to select your parent account and provide its password to finish adding the underage user.

You'll then go through the usual account setup screens—privacy policy, sign-in and security preferences, personalization, Kinect setup (if you have a Kinect), and Xbox Live Gold setup. You may want to lock your Xbox profile with a PIN for more security.

Sign-in & security preferences

		
Make it fast, make it magic Step in front of Kinect and you're signed in, ready to play. On this Xbox, people can sign you in, change your settings, and buy things without extra steps.	Check that it's me Step in front of Kinect and you're signed in, ready to play. We'll ask for your passkey before you buy things or change your settings, or if you sign in without being recognized.	Lock it down To sign in, buy things, or change your settings, you'll need to enter your Microsoft account password.

After the account is added, you'll be asked whether you want to add the account to your family. Select "Add to Family."

This is the same Family account group that's shared with Windows 10 PCs. You can manage your Family online, too.

Customize the Parental Controls for Each Child Account

Any accounts you add to your family will appear under Settings > Family. Select an account on this screen to manage it.

Respect Teamwork Empathy Self-Belief Honesty

You'll see several categories of settings here: Privacy & Online Safety, Access to Content, and Web Filtering. You can also choose to remove the user account from your Xbox One or family group from here.

The "Privacy & Online Safety" screen allows you to customize privacy and online settings. You can choose either "Child Defaults," "Teen Defaults," or "Adult Defaults." You can also select "View Details & Customize" to tweak the settings in more detail.

Teen defaults

Teens can

You can play and download free games, music, videos, and apps, make game clips, and see Kinect content other people make.

You can see other people's profiles, see their friends, and add people to your friends list.

You can socialize in multiplayer games, share Kinect content you make, communicate with friends, and share on social networks.

Others can

Friends can see if you're online and available, your profile, and who else you're friends with. They can also see your game clips and the music, apps, and games you enjoyed.

Your friends and their friends can see your profile and your real name.

Microsoft can use your video app history to improve your experiences. Microsoft will store your exercise info with your online profile and keep it private.

These settings allow you to control a variety of privacy settings. For example, you can control who can see when the account is online, what it's watching or listening to, its Xbox profile, the history of games played and apps used, and what videos the account has watched.

Customize privacy & online safety for Test

Others can see if you're online	Others can see what you're watching or listening to	Others can communicate with voice and text	Others can see your Xbox profile	Others can see your app history
Decide who can see that you're online and what you're doing.	Decide if others can see the live TV and on-demand videos you're watching and the music you're listening to right now. If you block online status, this is also blocked.	Decide who to communicate with on Xbox Live using voice and text.	Decide who can see info you choose to add to your Xbox profile.	Decide who can see your app history.
Friends	Block	Friends	Friends	Friends

The "Access to Content" screen allows you to control which games, media, and apps an account can play. This uses the game, movie, TV, music, and app age ratings. You can also hide images and demos of mature-rated games on the store, and prevent them from appearing when the user account searches.

The “Web Filtering” screen allows you to set up web filtering features. You can choose Turned off, Warn on adult, Basic communication, General interest, Designed for children, or Allow list only. These options run the gamut from entirely unfiltered to only allowing specific sites you choose.

Web filtering for Test

Web filtering

Allow list only

Designed for children

General interest

Basic communication

Warn on adult

Turned off

Allow list only

Only websites a parent has added to the Allow list on Xbox.com

Designed for children

Includes above, and allows websites designed for children while blocking adult sites

General interest

Includes above, and allows general-interest websites while blocking adult sites

Basic communication

Includes above, and allows social networking, web chat, and web mail while blocking adult sites

Warn on adult

Allows all content, and shows a warning before browsing to adult sites

Turned off

No web filtering

If your child wants to access restricted content in the future, a “Choose who will give permission” screen will appear. The child can then select your parent account to request access. You’ll need to enter your password, indicating you’ve provided permission for the child to access the normally restricted content.
